PRE-FUNDING BUSINESS CASE

# Operations workflow improvement

Prepared for layout review · November 5, 2026

## 01 Executive summary

Hard savings and capacity value remain separate.

**NPV · hard savings**

**-$10,000.00**

No documented cash reduction

**NPV · capacity-inclusive**

**$8,181.82**

Includes the value of freed time

**Annual capacity value**

**$20,000.00**

After adoption, recapture and haircut

**Cost present value**

**$10,000.00**

Initial investment at time zero

This example shows how a workflow improvement could release staff capacity. Freed time is presented separately from documented cash savings. The tables and charts use supplied fixture values to demonstrate the report layout.

| Metric | Hard savings | Capacity-inclusive |
|---|---|---|
| NPV | -$10,000.00 | $8,181.82 |
| ROI · undiscounted | -100.0% | 100.0% |
| ROI · NPV / PV of costs | -100.0% | 81.8% |
| Payback | None within horizon | 6 months · illustrative |

**Evidence status · not evaluated**

Illustrative figures only. Evidence and the confidence gate have not been evaluated. This document is a report layout preview, not a released assessment.

## 02 Context and assumptions

One-year horizon · USD · discount rate 10.0%

The proposed workflow reduces time spent on administration and onboarding. All inputs below belong to this synthetic layout fixture; no project evidence has been attached.

| Ref | Input | Entered value | Source |
|---|---|---|---|
| I1 | Annual gross capacity | $100,000.00 | Synthetic fixture |
| I2 | Adoption | 50.0% | Synthetic fixture |
| I3 | Productivity recapture | 50.0% | Synthetic fixture |
| I4 | Benefit haircut | 20.0% | Synthetic fixture |
| I5 | Initial investment | $10,000.00 | Synthetic fixture |
| I6 | Discount rate / horizon | 10.0% / 1 year | Synthetic fixture |

## 03 Benefits by driver

Annual adjusted value · capacity only

| Ref | Driver | Classification | Year 1 |
|---|---|---|---|
| A | Task administration | Capacity value | $16,000.00 |
| B | Onboarding | Capacity value | $4,000.00 |
| Total | All included examples | Capacity value | $20,000.00 |

**Confidence and backing**

No tier counts or confidence score are asserted in this preview. A production report must display the engine's backing summary and confidence alongside these values.

Benefit risks: adoption may take longer than planned, and freed time may not be redeployed. Time capacity must not be described as a budget reduction.

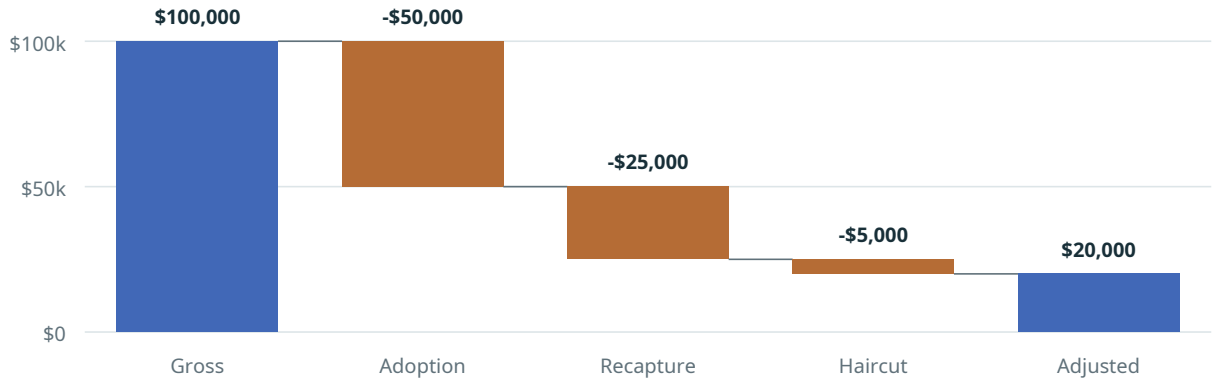
03

# Benefit adjustments

Ordered steps · supplied values · annual capacity in USD

## Waterfall · gross to adjusted value

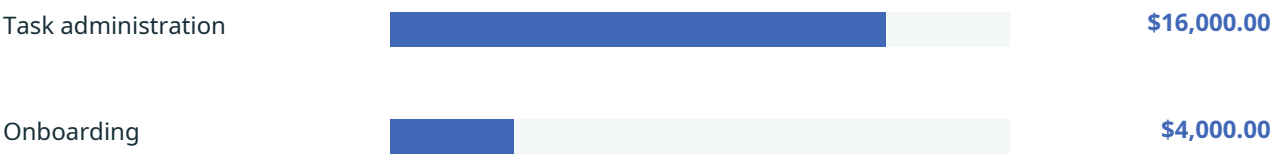
Blue = total capacity value · amber = reduction



| Ref | Step | Formula / basis | Output |
|---|---|---|---|
| S1 | Gross | Supplied annual gross value | $100,000.00 |
| S2 | After adoption | S1 × 50.0% | $50,000.00 |
| S3 | After recapture | S2 × 50.0% | $25,000.00 |
| S4 | After haircut | S3 × (1 - 20.0%) | $20,000.00 |
| S5 | Adjusted | Supplied adjusted total | $20,000.00 |

## Driver contribution

Year 1 · adjusted capacity value · total $20,000.00



## 04 Costs

Cost uplift is shown explicitly; figures are supplied by the fixture.

| Ref | Cost line | Timing | Base | Uplift | Adjusted |
|---|---|---|---|---|---|
| C1 | Implementation | Time zero | $8,000.00 | 25.0% | $10,000.00 |
| C2 | Recurring cost | Year 1 | $0.00 | 0.0% | $0.00 |

## 05 Unquantified benefits and flexibility

| Benefit | Treatment | What to add |
|---|---|---|
| Service consistency | Not quantified | Add before/after quality measures |
| Future workflow reuse | Flexibility | Validate reuse before assigning value |

**Cost evidence and timing**

The implementation line illustrates an uplift applied to an initial estimate. Both the base and adjusted amounts are supplied by the fixture. A real report must retain each cost's evidence, timing and source reference.

Unquantified benefits and flexibility are retained for discussion and measurement planning. Neither is silently assigned a dollar value or added to the financial headline.

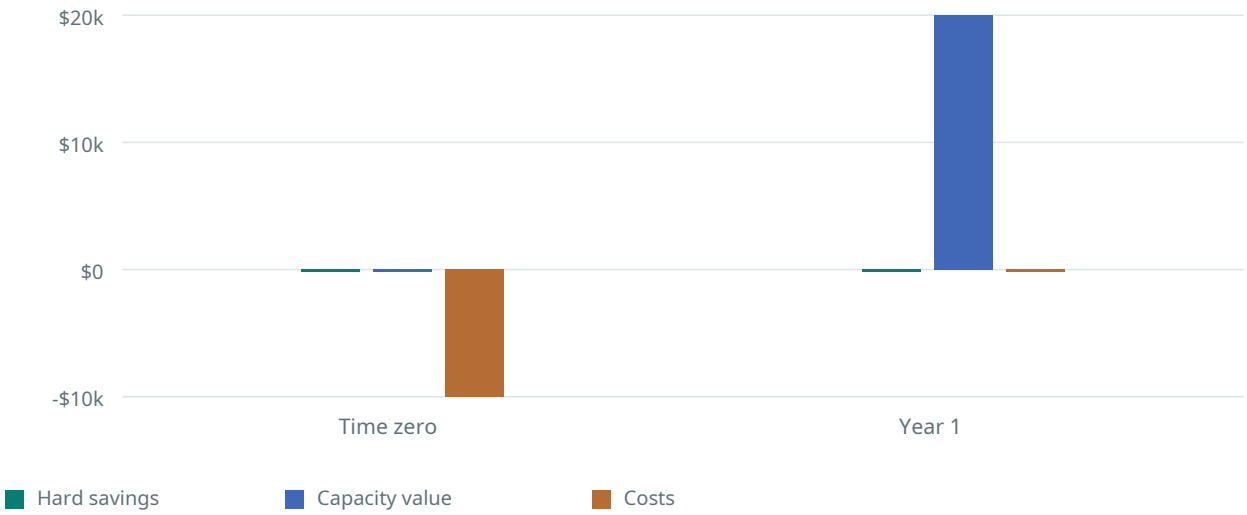
06

# Financial summary

Undiscounted cash flow · capacity is shown separately from cash savings.

## Cash-flow profile

USD · costs appear below zero



| Period | Hard benefit | Capacity | Cost | Net incl. capacity |
|---|---|---|---|---|
| Time zero | $0.00 | $0.00 | $10,000.00 | -$10,000.00 |
| Year 1 | $0.00 | $20,000.00 | $0.00 | $20,000.00 |

### Basis and discount rate

Cash-flow bars show undiscounted period values. NPV uses the supplied 10.0% discount rate and one-year horizon. Capacity-inclusive metrics are distinct from documented cash savings.

07

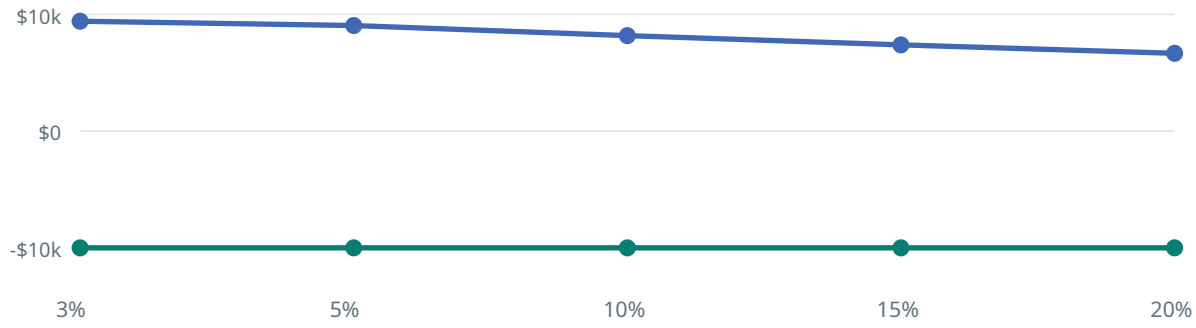
# Scenarios and sensitivity

Illustrative scenarios vary adoption; the other fixture assumptions stay fixed.

| Scenario | Adoption | Annual capacity | NPV incl. capacity | PV ROI incl. capacity |
|---|---|---|---|---|
| Conservative | 35.0% | $14,000.00 | $2,727.27 | 27.3% |
| Expected | 50.0% | $20,000.00 | $8,181.82 | 81.8% |
| Optimistic | 65.0% | $26,000.00 | $13,636.36 | 136.4% |

## NPV across discount rates

Blue = capacity-inclusive · teal = hard savings · one-year horizon



| Discount rate | NPV · hard | NPV · capacity-inclusive |
|---|---|---|
| 3% | -$10,000.00 | $9,417.48 |
| 5% | -$10,000.00 | $9,047.62 |
| 10% | -$10,000.00 | $8,181.82 |
| 15% | -$10,000.00 | $7,391.30 |
| 20% | -$10,000.00 | $6,666.67 |

## 08 Risks of doing nothing vs proceeding

| Decision | Risk | Response / next step |
|---|---|---|
| Doing nothing | Manual effort continues | Measure the current workload |
| Proceeding | Adoption may be slower | Track active use against the plan |
| Proceeding | Freed time may not be reused | Agree a capacity allocation plan |

## 09 Measurement plan

Baselines and owners remain visibly unspecified until evidence is supplied.

| Driver | Baseline | How to measure | Owner | Frequency |
|---|---|---|---|---|
| Task administration | Not measured | Compare task time before and after launch | Not assigned | Monthly |
| Onboarding | Not measured | Compare onboarding effort across cohorts | Not assigned | Per cohort |

**Before a funding decision**

Assign a measurement owner, capture a baseline and confirm how released capacity will be used. A documented spending reduction is required before capacity can be classified as hard savings.

10

# Appendix · formulas and audit trail

References stay with their source values and definitions.

## Reference ledger

| Ref | Item | Definition / source |
|---|---|---|
| I1–I6 | Input snapshot | Synthetic fixture; not source evidence |
| S1–S5 | Adjustment steps | Values are supplied, not recomputed by this renderer |
| C1–C2 | Cost lines | Timing and uplift are illustrative |
| F1 | NPV convention | Initial cost at time zero; benefit at year end |
| F2 | ROI convention | Undiscounted and PV-based definitions stay distinct |
| F3 | Payback convention | Illustrative monthly timing; not a verified forecast |
| E1 | Evidence status | No evidence tiers or confidence gate evaluated |
| V1 | Template | uniform-preview-2; run layout-preview-02 |

**Report status**

Illustrative figures only. Evidence and the confidence gate have not been evaluated. This document is a report layout preview, not a released assessment.
